EDUCATION

Illinois Institute of Technology **Aug. 2024 - Jun. 2028**
Ph.D. in Computer Engineering. Advisor: Prof. Ren Wang GPA: 4.0/4.0

Soochow University **Sep. 2021 - Jun. 2024**
M.E. in Computer Technology. Advisor: Prof. Jingya Zhou GPA: 3.8/4.0

Hangzhou Normal University **Sep. 2017 - Jun. 2021**
B.E. in Computer Science and Technology. GPA: 3.8/4.0

RESEARCH INTERESTS

Trustworthy post-training for LLMs and LLM-based agents, with a focus on removing, editing, and controlling learned knowledge and behaviors.
Keywords: Post-training, Safety Alignment, Agent Safety, Self-evolving Agents, Unlearning

RESEARCH EXPERIENCE

TIML Lab, Illinois Institute of Technology Aug. 2024 – Present

LLM Agents & Post-training

- **Trajectory Unlearning for LLM Agents** [Under review]. Formulated *trajectory unlearning*, extending unlearning from factual knowledge to **long-horizon** agent *behaviors*. Built agent unlearning benchmarks on **ALFWorld** and **WebShop**, and proposed GiRPO, a GRPO-based on-policy RL algorithm that reduces similarity to forgotten trajectories to **3%** on Qwen2.5-7B-Instruct while preserving task success rate.
- **Self-Unlearning for Self-Evolving Agents** [Ongoing]. Found that **self-evolving agents** silently re-acquire unlearned knowledge while evolving; designing self-unlearning inside the evolution loop to prevent re-memorization.
- **Knowledge Entanglement in LLMs** [Ongoing]. Modeled knowledge as hidden-state *subspaces* (not single vectors) and quantified inter-knowledge entanglement to guide targeted, low-collateral unlearning in LLMs.

Machine Unlearning & Trustworthy ML

- **Plasticity Collapse in Continual Unlearning** [**ECCV 2026, first author**]. Identified *plasticity collapse*: models gradually fail to forget new requests and re-memorize previously forgotten data. Traced it theoretically to accumulating geometric constraints in parameter space; validated on classification, DDPM, and LLaVA.
- **Nonlinear Unlearning via Mode Connectivity** [**ICML 2026, first author**]. Showed linear unlearning updates suffer from weight entanglement; proposed a nonlinear pathway along mode-connected curves, a plug-and-play add-on to existing methods that mitigates over- and under-forgetting.
- **Fake Forgetting** [**ICML 2026, first author**]. Used conformal prediction to show samples "forgotten" under accuracy metrics remain exposed; proposed an uncertainty-aware metric and unlearning framework to close the gap.
- **GNN Watermarking** [**ICML 2026, co-first author**]. Exposed ownership ambiguity and poisoning risks of backdoor watermarks; proposed an explanation-based watermark requiring no training-data manipulation.

TECHNICAL SKILLS

Languages: Python, C/C++, SQL, Bash
ML / LLM Frameworks: PyTorch, Hugging Face (Transformers, PEFT, TRL), verl, vLLM, DeepSpeed, PyTorch Geometric
Post-training: SFT, LoRA, DPO, GRPO, on-policy distillation, agentic RL
Infrastructure: Linux, Slurm, Docker, Git, Weights & Biases
